

COP2806C Module 1 Programming Assignment Part 3 - Create a Java EE Application

In this assignment we will use IntelliJ to create a simple Java EE Web application.

I would recommend that you use the Horizon system to complete this assignment as all required software is available on that system.

Complete the tutorial "Your first Java EE application" found at

<https://www.jetbrains.com/help/idea/creating-and-running-your-first-java-ee-application.html>

Follow the instructions in the tutorial to create the project and execute the application, then submit your project folder to the GitHub classroom repo.

Your project submission should contain all source code and three screen snips demonstrating execution of your application with the exploded WAR, unexploded WAR, and EAR run configurations.

There is no Canvas submission for this assignment.
